

数据科学与工程算法基础 习题11

10195501436 龚敬洋

1

引入 0-1 变量

$$w = \begin{cases} 1, & x_1 + x_2 + x_3 + x_4 \leq 4 \\ 0, & 3x_1 - x_2 - x_3 + x_4 \leq 3 \end{cases}$$

则对于足够大的正数 M ，其对应的约束可以改写为

$$\begin{aligned} x_1 + x_2 + x_3 + x_4 &\leq 4 + M(1 - w) \\ 3x_1 - x_2 - x_3 + x_4 &\leq 3 + Mw \end{aligned}$$

4

设变量

$$x_i = \begin{cases} 1, & \text{choose } S_i \\ 0, & \text{otherwise} \end{cases}, 1 \leq i \leq m$$

因此原问题可以写为

$$\begin{aligned} \max \quad & c_1x_1 + \cdots + c_mx_m \\ \text{s.t} \quad & S_i \cap S_j = \emptyset, 1 \leq i < j \leq m \end{aligned}$$

6

1. LP (1) :

$$\begin{aligned} \max \quad & 10x_1 + 4x_2 + 9x_3 \\ \text{s.t} \quad & 5x_1 + 4x_2 + 3x_3 \leq 9, 0 \leq x_i \leq 1 (1 \leq i \leq 3) \end{aligned}$$

2. 当 $x_1 = 1$ 时,

LP (1) :

$$\begin{aligned} \max \quad & 10 + 4x_2 + 9x_3 \\ \text{s.t} \quad & 5 + 4x_2 + 3x_3 \leq 9, 0 \leq x_i \leq 1 (2 \leq i \leq 3) \end{aligned}$$

该问题的最优解为 $x_2 = \frac{1}{4}, x_3 = 1, z = 20$

因此 IP (1) 的上界为 $Z_{LP(1)} = 20$

3. IP (1) 的松弛线性规划LP (1) 作为枚举树的根结点被标记为active

当前最优解 $Z_1 = -\infty$

LP (1) 的最优解: $x_1 = 1, x_2 = \frac{1}{4}, x_3 = 1, z = 20$

$Z_{LP(1)} > Z_1$, 且 $x(1)$ 为非整数解

IP (1) 置为inactive, IP (2) 和IP (3) 置为active

LP (2) :

$$\begin{array}{ll}\mathbf{max} & 10x_1 + 4x_2 + 9x_3 \\ \mathbf{s.t} & 5x_1 + 4x_2 + 3x_3 \leq 9, x_1 = 0, 0 \leq x_i \leq 1 (2 \leq i \leq 3)\end{array}$$

LP (2) 最优解: $x_1 = 0, x_2 = 1, x_3 = 1, z = 13$

$Z_{LP(2)} > Z_1$, 且 $x(2)$ 为整数解, 即 $x(2)$ 是IP (2) 的可行解

更新 $Z_1 = Z_{LP(2)} = Z_{IP(2)} = 13$

LP (3) :

$$\begin{array}{ll}\mathbf{max} & 10x_1 + 4x_2 + 9x_3 \\ \mathbf{s.t} & 5x_1 + 4x_2 + 3x_3 \leq 9, x_1 = 1, 0 \leq x_i \leq 1 (2 \leq i \leq 3)\end{array}$$

LP (3) 最优解: $x_1 = 1, x_2 = \frac{1}{4}, x_3 = 1, z = 20$

$Z_{LP(3)} > Z_1$, 且 $x(3)$ 为非整数解

IP (3) 置为inactive, IP (4) 和IP (5) 置为active

LP (4) :

$$\begin{array}{ll}\mathbf{max} & 10x_1 + 4x_2 + 9x_3 \\ \mathbf{s.t} & 5x_1 + 4x_2 + 3x_3 \leq 9, x_1 = 1, x_2 = 0, 0 \leq x_3 \leq 1\end{array}$$

LP (4) 最优解: $x_1 = 1, x_2 = 0, x_3 = 1, z = 19$

$Z_{LP(4)} > Z_1$, 且 $x(4)$ 为整数解, 即 $x(4)$ 是IP (4) 的可行解

更新 $Z_1 = Z_{LP(4)} = Z_{IP(4)} = 19$

LP (5) :

$$\begin{array}{ll}\mathbf{max} & 10x_1 + 4x_2 + 9x_3 \\ \mathbf{s.t} & 5x_1 + 4x_2 + 3x_3 = 9, x_1 = 1, x_2 = 1, 0 \leq x_3 \leq 1\end{array}$$

LP (5) 最优解: $x_1 = 1, x_2 = 1, x_3 = 0, z = 14$

$Z_{LP(5)} < Z_1$

至此, 分支定界算法结束

最优解为 $x_1 = 1, x_2 = 0, x_3 = 1, z = 19$
